Course Objectives:

Advanced procedure-based course highlighting the technical and logistical aspects of one session laparoscopic exploration of the bile duct. A course designed for consultants and senior trainees with the skills of routine and emergency laparoscopic cholecystectomy who may already have experience with intra-operative cholangiography. The candidates are made familiar with the technical aspects through short interactive talks. The course has a major practical hands-on component with opportunity to practice cholangiography, trans-cystic duct cannulation and exploration, choledochotomy exploration and methods of biliary drainage. There will be emphasis on the handling and optimal use of 3mm & 5mm choledochoscopes. Well-designed animal tissue models allow for task repetition and skills development and consolidation. Adequate time is dedicated to detailed discussions of technical aspects utilising extensive video material selected from 1250 Laparoscopic bile duct explorations.
